

哈尔滨浦南江畔广场设计研究

Design of City Pavilion on Punan Waterfront Plaza, Harbin (Draft for discussion)

1. Site and Context:

The site locates on the intersection point of a water front park along the Songhua River and a boulevard across a planned business center and high rise residential neighborhoods. A 7 lanes drive way on top of dam (about 5-7 meters above water level and site) between park and river might be a barrier for easy accessibility to the water and ferry docks. Across the river is the downtown area of Harbin, about 300m away on the river an islet will be developed as a park.

Fig.2 land use planning around site

2.Goals of Design:

- Enhancing the connection between high density built area with beautiful nature on and along the river, in terms of both traffic and views.
- Provide a sheltered space for leisure, sports and rest.
- Set a Icon for the node point of water front open space north of Songhua River.
- Provide a favorite place for enjoying the charming landscape on and along the river.

3. Contents of Design:

- 1.1. Major building will be a city pavilion composed of mainly semi-open space, building area should be between 8000-10000 sq m.
- 1.2. Landscape planning of the park immediately around the major building, consideration should be paid to the connections to business center, water, even the islet on the river.
- 1.3. Arrangement of bus stops, parkings, and ferry docks on water.
- 1.4. Orientation of function, themes, tectonics based on investigation of site and surrounding context.

4. Key points of Schedule

- Briefing announcement: February 1st (?) for Spain students, March 8rd for Chinese students.
- on site investigation and lectures of joint groups: March 9th- 12th, in Harbin.
- final review of graduate design, May 10th.(?) in Spain.
